

**Auxiliary Output Setup:**

- Function: FP Relay
- Polarity: High

**Digital Input Setup (if used):**

- Function: GP Input
- On Level: High
- Pullup: Off

**Controller Behavior:**

- FPC pin high (12V) = Pump at full speed
- FPC pin low (0V) = Pump Off
- FPC can be PWM controlled for variable pump speed. 0% DC = full speed, 100% DC = pump off.
